INSTALLATION INSTRUCTIONS

To customers:

- Thank you for choosing our products !
- Please read this instruction carefully before using the product.
- This manual should be retained for the future reference.

Please confirm the following important matters before starting each work, in order to ensure safe construction!
If there is any problems with the product, please turn off the power supply and please consult our agent or ask qualified electrician.

Warning: Wrong using may cause accidents.

Caution: Incorrect using may cause damage.

Before Installation	Warning	Forbidden to use	This product is widely used in indoor application only and it cannot be used under the following environmental conditions. (Risk of Drop, Risk of Electric Shock, Risk of Fire) - Where ambient temperature is under -10°C or above 40°C - Where air conditioner or air outlet exist - Where ceilings that cannot bear the weight of fixture - Where inclined and uneven ceiling exist - Where fixture is exposed to direct sunlight - Where dust and corrosive gas exist - Where vibration and shock exist - Outdoor Application • Wet place where humidity is of $\geq 80\%$ PH - Where building insulation may be present in normal use Please contact Customers Service Team, once use environment cannot be confirmed to be applicable or not.
During Installation	Warning	To be carried out	- The fixture should be installed by a electrician with relevant qualification certificate. (Risk of Safety Accident) - The lighting circuit should be wired separately, compared with other power lines, such as air conditioners or high-power electric equipments. - Please make sure the power is switched off before installation or maintenance, And it's switched on only after correct wiring. - Don't disassemble or retrofit the fixture. (Risk of Electric Shock, Risk of Fire, Risk of Drop, Risk of Failure). - Don't touch the fixture when it is working or in a high temperature condition, when fixture just went out (Risk of Burning). - Don't operate by wet hands (Risk of Electric Shock). - Avoid strong alternating magnetic fields around the luminaire. - The built-in magnet structure of the luminaire has strong suction force. - Avoid touching adsorption surface when placing in linear module. Install safety buckle. (Risk of falling)
	Caution	To be carried out	- The actual power is between 90%~110% from the rated power. (The load current carrying capacity of the wire should be considered in construction wiring). - The force bearing point of installation in the ceiling board must be 4 times higher than the fixture weight. (Risk of Drop or Damage) - The fire regulations must be observed, when fixture is working. (Risk of Fire) - Non replaceable light source: Light source of this fixture is not replaceable. When the light source reaches its end, the entire fixture should be replaced. - Please cut off the power supply immediately, if smoke or odor occur, then contact the electrical contractor. (Risk of Fire)

Places of use: hotels, villas, clubs, commercial complexes, shops, offices, office buildings and other indoor places.

Surface-mounted Luminaire Installation Instructions

Product Name	Product Model	Included Components	Spatial Installation Dimensions(L*W*H)
Surface-mounted Luminaire	MT2A-L 1000MM	Main body X1 Self tapping screw X3 Expansion rubber plug X3 Piece of connection X2	1000*20*13.5mm
Surface-mounted Luminaire	MT2A-L 2000MM	Main body X1 Self tapping screw X5 Expansion rubber plug X5 Piece of connection X2	2000*20*13.5mm

Installation Note: Dimensions include both end caps.

Cutting Instructions for Surface-Mounted Linear Luminaire Splice Sections

The length of the linear luminaire body is flexible, and the splice section can be cut according to on-site installation dimensional requirements. (Figure 1)

Important Notes:

- ※ Actual construction sites may deviate from design drawings, potentially causing inconsistencies between pre-embedded fixtures (installation channels) and on-site conditions.
- ※ At sites with construction feasibility, professionals with appropriate qualifications may perform 90° vertical cutting on pre-embedded fixtures (installation channels) based on actual conditions, provided safety is ensured.
- ※ It is recommended to use aluminum alloy-specific saw blades (blade diameter should not be less than $\varnothing 300$ mm) during cutting.

1. Draw a straight line on the ceiling or wall, mark the drilling positions, and create holes. Fix the light fixture to the ceiling, then inspect the screw tightness to ensure secure installation, as illustrated in Figure 2.

2.Connect the conductive connector wire to the DC24V power supply (Maya 16K Special Driver), as shown in Figure 3.

3.Install the conductive connector into the lamp body as shown in Figure 4-6.

Installation of Spotlight Module

1.The lighting module is pressed and latched into the track, with the spotlight secured by latches and magnetic adhesion within the track,(as shown in Figure 7).

2.The spotlight power supply box shall be fully snapped into the track and securely fixed, ensuring no part protrudes beyond the track surface. As illustrated in Figure 8.

Removal of Spotlight Module

1.Press the protruding button on one side of the power box to retract the clasp. While holding the button, pull down this end first (as shown in Figure 9).

1.Remove the entire spotlight unit from the track. (as shown in Figure 10).
2.Optical Accessories:A small-aperture focusing tube accessory can be added to achieve a more concentrated light effect.
